DAVID MUTCH

Senior Software Engineer | React, TypeScript, Node.js, Python, Web Architecture & Cloud

Billings, MT | (281) 560-3942 | davidmutch1989@gmail.com

PROFESSIONAL SUMMARY

Senior Software Engineer with extensive experience in Web Development, Frontend Architecture, Backend Integration, and scalable software solutions across Insurance, FinTech, and Software Consulting environments. Strong background building modern web applications using React, TypeScript, Vue.js, JavaScript, Node.js, and Python, with experience developing REST APIs, data-driven interfaces, and cloud-based solutions.

Experienced in Frontend Performance, responsive design, accessibility, data visualization, application architecture, technical documentation, and maintainable software development. Strong collaborator across engineering, product, UX, and business teams, translating requirements and user feedback into practical technical solutions while maintaining usability, scalability, and performance.

Hands-on experience across AWS, GCP, Docker, Kubernetes, CI/CD, PostgreSQL, MySQL, MongoDB, Redis, GraphQL, and modern development tooling. Recognized for technical ownership, mentoring, collaboration, continuous improvement, adaptability, and leading engineering initiatives from technical design through execution.

EXPERIENCE

Senior Software Engineer | Centare

07/2020 – Present | Software Consulting / Technology Services

- Provided technical leadership across software-development initiatives, translating business and product requirements into scalable, maintainable technical solutions.
- Led technical design and architecture discussions covering frontend applications, backend services, REST APIs, databases, cloud infrastructure, and deployment workflows.
- Designed and developed modern web applications using React, TypeScript, JavaScript, Node.js, and Python.
- Established reusable frontend architecture and development patterns supporting maintainability, scalability, usability, and consistent engineering practices.
- Collaborated with product managers, UX designers, engineers, and business stakeholders to define requirements and deliver production-ready solutions.
- Mentored engineers through code reviews, technical guidance, documentation, troubleshooting, and development best practices.
- Designed and integrated REST APIs and GraphQL services connecting frontend applications with backend systems and external services.
- Contributed to cloud and DevOps initiatives using AWS, GCP, Docker, Kubernetes, and CI/CD technologies.
- Supported automated unit and integration testing while promoting technical documentation, maintainability, and continuous improvement.
- Worked on frontend performance, responsive design, accessibility, and application scalability across evolving software products.
- **Tech Stack:** React, TypeScript, Vue.js, JavaScript, Node.js, Python, REST APIs, GraphQL, PostgreSQL, MySQL, MongoDB, Redis, Docker, Kubernetes, AWS, GCP, CI/CD, Git, GitHub Actions, Jenkins, Jira, Confluence

Senior Software Engineer | FastPay

08/2016 – 06/2020 | FinTech / Financial Services / Payments

- Developed software solutions supporting financial and payment-related business workflows within a FinTech environment.
- Designed and implemented web application functionality using JavaScript, React, TypeScript, Node.js, and modern web-development practices.
- Built and integrated REST APIs connecting user-facing applications with backend financial services and internal systems.
- Worked with relational and NoSQL databases to support application functionality, reporting, and data-driven workflows.
- Participated in application architecture and technical-design decisions focused on scalability, maintainability, reliability, and performance.
- Collaborated with product managers, engineers, and business stakeholders to translate financial-product requirements into technical solutions.
- Implemented unit and integration testing to improve software quality and support reliable application releases.
- Participated in code reviews, technical documentation, debugging, production support, and continuous improvement initiatives.
- Supported cloud-based development and deployment workflows using Docker, AWS, CI/CD, and Git.
- Progressed from Software Engineer to Senior Software Engineer, taking on increasing responsibility for technical design, implementation, and engineering collaboration.
- **Tech Stack:** React, TypeScript, JavaScript, Node.js, Python, REST APIs, PostgreSQL, MySQL, MongoDB, Redis, Docker, AWS, Git, CI/CD, unit testing, integration testing

EXPERIENCE — CONTINUED

Software Engineer | CoverHound

08/2011 – 07/2016 | Insurance / InsurTech

- Developed and maintained web applications supporting digital insurance workflows and customer-facing experiences.
- Built frontend functionality using JavaScript, HTML5, and CSS3 with a focus on usability and responsive web development.
- Integrated frontend applications with backend services and REST APIs supporting insurance-related application workflows.
- Worked across frontend and backend components to retrieve, process, and display application data.
- Participated in software design, development, debugging, testing, code reviews, and production issue resolution.
- Collaborated with product and engineering team members to translate business requirements into maintainable software solutions.
- Contributed to application performance, scalability, documentation, and continuous improvement of development practices.
- **Tech Stack:** JavaScript, HTML5, CSS3, REST APIs, SQL, Git, Web Development, Backend Integration, Unit Testing

EDUCATION

Montana State University — Bozeman, MT

Bachelor of Science in Computer Science

May 2011

SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frontend: React, Vue.js, Vue, Next.js, Redux, Vite, Webpack, Sass, Tailwind CSS, Responsive Design, Accessibility, UI/UX

Backend: Node.js, Express.js, FastAPI, Django, REST APIs, GraphQL

Databases & Data: PostgreSQL, MySQL, MongoDB, Redis, Data Visualization

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins

Architecture & Engineering: Frontend Architecture, Backend Development, System Architecture, Frontend Performance, Performance Optimization, Scalability, Unit Testing, Integration Testing, Technical Documentation, Code Review, Maintainability

Leadership & Collaboration: Technical Leadership, Mentoring, Coaching, Team Collaboration, Project Management, Stakeholder Communication, Product Collaboration, User Feedback, Technical Design, Continuous Improvement, Continuous Learning, Innovation, Ownership, Execution
